

Station Browser Extension

Privacy Policy

Effective date: October 18, 2026 · Last updated: October 18, 2026

Publisher: ArvishStudio

1. Overview

Station is a browser extension from ArvishStudio that provides on-page tools for designers, developers, and marketing teams—including SEO and GEO checks, accessibility and performance signals, element inspection, color sampling, screenshots, and related workspace panels. This Privacy Policy explains what information Station handles and how that information is treated.

2. Information Station Processes

Station runs in your browser and works on the web page you are already viewing. When you use Station, it may temporarily access information that is necessary to provide the features you request, such as:

- Content and structure of the active page (for example HTML, CSS, and layout details used by the inspector, search, audits, and design-system tools).
- Page metadata and related signals (for example titles, meta tags, Open Graph data, links, and structured data used by SEO, GEO, and meta tools).
- Screenshots or cropped captures you request of the viewport, full page, a selected element, or a drawn area.
- Local preferences or UI state needed for the extension to remember how you use Station on your device.

3. How Information Is Used

Station uses the information described above solely to deliver and improve the on-page features you choose to run—for example to display audit results, inspector panels, color values, device previews, accessibility findings, or screenshots on your device.

4. Local Processing and Data Sharing

Station is designed to process page information locally in your browser. Station does not require an account to use its core tools. Station does not sell your personal information. Station does not send the contents of the pages you inspect, your browsing history, or screenshots you capture to ArvishStudio servers for advertising or profiling.

If a future version of Station offers optional cloud features, account sync, or analytics, those features will be clearly disclosed and will be governed by an updated version of this Privacy Policy before they are enabled.

5. Permissions

Station may request browser permissions that allow it to run on the active tab, read page content needed for audits and inspection, capture screenshots, and store extension settings. Those permissions are used only

to provide Station's features and are not used to collect unrelated browsing data in the background.

6. Storage and Retention

Any preferences or temporary results Station stores are kept locally through your browser's extension storage or similar client-side mechanisms. You can remove stored extension data by clearing site/extension data in your browser or by uninstalling Station. Because Station processes information on-device for the features you run, ArvishStudio does not maintain a separate server-side archive of the pages you inspect.

7. Children's Privacy

Station is not directed to children under 13 (or the equivalent minimum age in your jurisdiction), and ArvishStudio does not knowingly collect personal information from children.

8. Changes to This Policy

ArvishStudio may update this Privacy Policy from time to time. The "Last updated" date at the top of this document will change when revisions are published. Continued use of Station after an update means you accept the revised Policy.

9. Contact

If you have questions about this Privacy Policy or Station's privacy practices, contact ArvishStudio through the website where Station is published (the ArvishStudio product site that hosts this Policy).
